Course Code: CSA1013

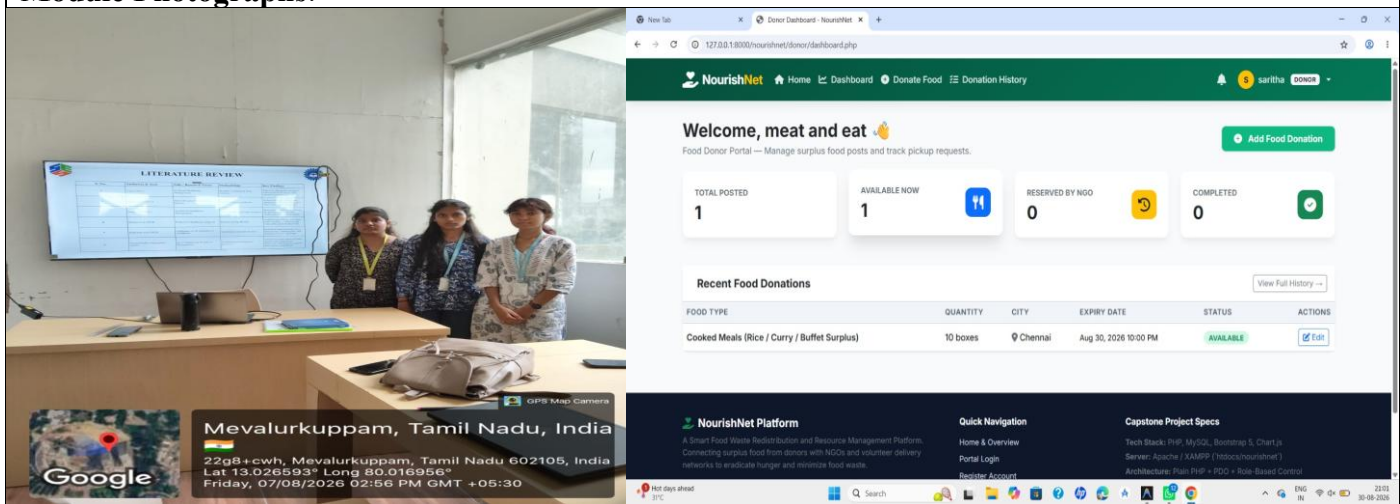

Slot: B

Course Name: Software Engineering

Course Faculty: Dr. Latha R.

Project Title: NourishNet: A Smart Food Waste Redistribution and Resource Management Platform

Module Photographs:

Project Description: Module 2: Food Donation & Resource Management

NourishNet is a smart web-based food waste redistribution and resource management platform designed to reduce food wastage and address food insecurity. The system connects food donors such as restaurants, hotels, institutions, and individuals with NGOs and volunteers who help collect and distribute surplus food to people in need. It provides a centralized platform for managing food donations, resources, users, and deliveries, while enabling real-time tracking and communication. By automating the donation and redistribution process, NourishNet improves coordination, reduces food wastage, and ensures that surplus food reaches beneficiaries safely and efficiently.

Module 2 – Food Donation & Resource Management manages the complete process of adding and maintaining food donations on the platform. Donors can enter important details such as the **food type, quantity, and expiry date**, allowing the system to maintain an updated inventory of available food resources. The availability and status of donations are updated in real time, ensuring that users have accurate information about currently available resources. The module also maintains previous donation records and history for easy reference. **CRUD operations and input validation** are used to ensure that food donation data is entered accurately, stored properly, and managed efficiently.
